

CISTIM, a CD3 partner, is a small-molecule drug discovery center. For the expansion of our research team in Leuven (Belgium), we are currently looking for a:

SCIENTIST BIOLOGY – DRUG DISCOVERY

Within the biology research team, your responsibilities will consist of assay development and screening in various small-molecule drug discovery projects, with the aim of discovering new therapeutics. You will execute lab-based activities, analyze your data and diligently report on the results to the high-throughput screening manager and/or the project leader.

Profile :

- You hold a professional bachelor degree in Biomedical Laboratory Technology or master degree in Biomedical Sciences, or equivalent (also by experience);
- You have practical experience with in-vitro and cellular assays. Experience with development of and running high-throughput screening assays evaluating small molecules is a strong asset.
- You have a strong interest in biomedical research and drug discovery;
- You are a team player who can operate independently, is quality oriented, can work accurately and is well-organized;
- You are goal oriented and can handle deadlines and pressure;
- You are curious, have an eye for detail and quickly learn new skills;
- You are communicative and fluent in English.

Offer :

Employment contract of unlimited duration
Competitive salary package.
